

12. (Original). The cutter disc according to Claim 11, wherein the blades of said second group extend tangentially with respect to said center circular region.

13. (Original). The cutter disc according to Claim 11, wherein the blades of said second group radiate from approximately the mid-points of radial lines through said central circular region.

14. and 15. (Canceled).

J.B. 16. (Original). The cutter disc according to Claim ¹¹~~14~~, wherein the two blades of said first group have substantially straight, slightly convex, diametrically-aligned cutting edges.

17. and 18. (Canceled).

19. (Previously Presented). A cutter disc for a juice extractor appliance having a feed tube through which food articles are to be fed for extracting juice therefrom;

said cutter disc including means for mounting the cutter disc with respect to the feed tube, and being formed, on its surface to face the feed tube, with a first group of blades in a circular region centrally of the cutter disc, and with a second group of blades in an outer peripheral region around the central circular region;

said first group of blades consisting of at least one blade located on each of the opposite sides of said central circular region and diametrically aligned with each other and with the center of said central circular region;
